Third tab location measurement guide

1. Measure from the **center of the rail down** to where you would like the tab located. _____
2. Measure over from the **right seam (this is back right edge of your existing cover)** to the **center point** of where you would like the 3rd tab located.

3. Are you mounting third tab to a **HORIZONTAL** bar or **VERTICAL** stanchion?

4. Our tabs will fit rails 1" - 1 1/4" in diameter. If you're mounting on lifelines, or thicker rails, please reach out with that information.
5. Angled tabs are also possible. Provide us enough information about the angle and we will make it happen (pictures are welcomed).

Please return your completed form/information to Misty. standout@wavecable.com
