

Grab Rail Cover Measuring Form

Additional instructions, if necessary:

A Putting your tape measure on the deck, measure the length of the inside of the loop (inside edge to inside edge).

B Putting your tape measure on the deck, measure the length of one of the inner wood support pieces on either side of the loop (outside edge to outside edge).

C Measure the "up and over" dimension: from deck to deck, across the top of the rail.

D Measure the top of the rail from center of one support piece to the center of the next support piece. This should equal the "on center" size you ordered.

E Bottom photo: Measure the total length of one rail (the covers come in pairs and assume both rails are identical). This measurement should be taken along the deck from one end to the other. DO NOT measure from the deck up and along the rail and down to the deck on the other end - this measurement will be too long.

F Not shown: Number of loops (openings) on one handrail.

We need this information to make your custom covers - Simply include this information as a note to seller during checkout (payment) or email the numbers or PDF of this form to: standoutyf@gmail.com.
